4Q22: Middle of the Road

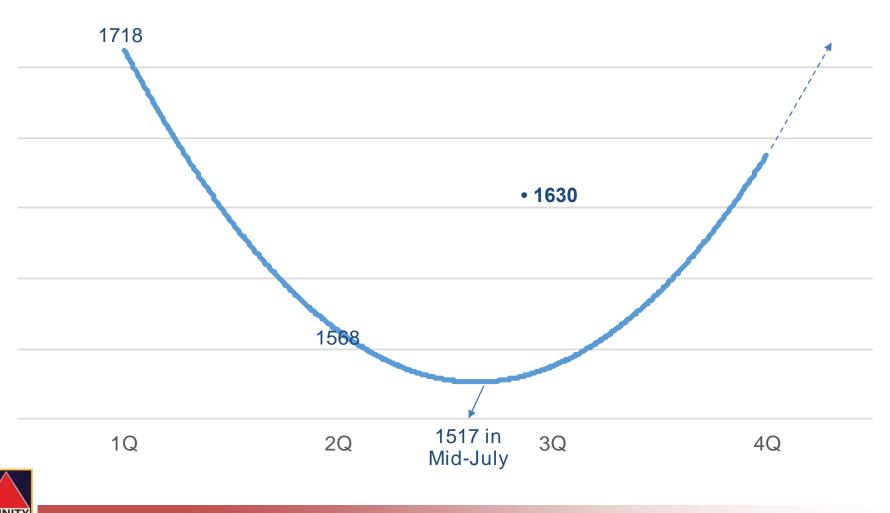

September 2022

Nuttachart Mekmasin, CFA, FRM Trinity Securities

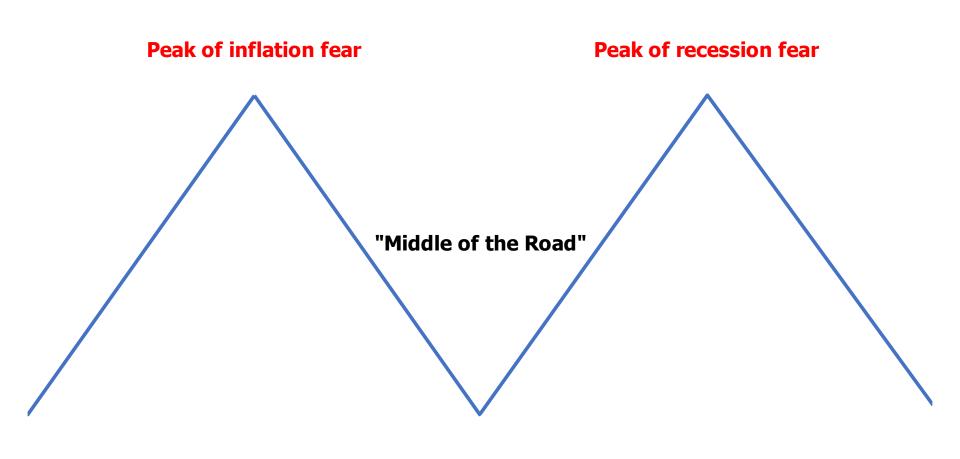

Stick with U-shape pattern for SET in 2022, <u>but 4Q</u> bounce has more chance to test 1Q peak

Projected SET trajectory in 2022

We are right in the middle

What surprised us so far in 3Q22

- 1) Strong EPS momentum for SET Index. In 3Q we see 2022E EPS being upgraded by 3.4% mostly in ENERG & HELTH
- 2) Flows were not diverting from stock to bond, eventhough EYG was significantly below average. This could be explained by ample global liquidity and (still) dim recession fear.
- 3) A revert back to 3.5% of 10y UST yield which make our <u>OW</u> call on bond in the quarter look bad.
- 4) An underperformance of China which could be partly explained by a renew of Zero-Covid policy.

What did not surprise us

- 1) A bounce in global equity which was due mainly to a peakout in inflation.
- A prolonged twin deficit problem in Thailand. Service balance recovered slower than market expectation. THB declined by 4% in the quarter.
- 3) Declining Thai FX reserves to the lowest level since 2019
- 4) Excluding SETETRON which was heavily affected by DELTA, SETHELTH is the most outperforming sector in 3Q22

- 4Q22 1Q23 should be right in the middle between peak of inflation fear and peak of recession fear. So this is the time that risk sentiment will sit right in the middle. Market will move sideways and that's why 'Sell into strength' and 'Buy on weakness' strategies should be applied.
- 2) A selloff in bonds while inflation (both spot & expectations) remained anchored has caused real bond yield to reach new height. In the past, this is a main caveat for risk assets such as equity and alternative assets such as gold.

- 3) 4Q22 could still be too early for the global recession to panned out. Unless U.S. unemployment rate hit 4-5%, market will likely not much concern about it. As a result the Great rotation from stocks to bond may be still yet to come, and thus a drop in UST yield to below 3% may still not occur.
- Global liquidity is still ample as depicted by global central bank balance sheet. Fed did not walk the talk in regards to the pace of Quantitative Tightening (Balance sheet reduction). Unless there is a major shift, expect risk assets to continue being supported by 'Buy on Dip' phenomena.

- 5) Domestic demand in Thailand is on a brighter side when compared to external demand that will be hard hit from economic slowdown in DM and China. Unlike UST, 2s10s spread in Thailand is now creeping up nicely and should bode well to domestic cyclical stocks.
- 6) However key risk for domestic consumption is persistent inflation which now becomes a global problem as basic prices such as food are very sticky to change. If this continues, expect a little negative implication on household spending. In addition, it could put pressure on BoT to send stronger hawkish signal which is normally not a good thing for stock.

- 7) China Communist party's congress in mid-October comes with so much high expectations. A 3rd term of Xi Jinping is widely expected, however the main focus will be the roadmap out of China's zero-Covid policy / measures to deal with property sector debt / Central Bank action against falling yuan. Any shift in policy would be welcomed by the market.
- 8) U.S Mid-term election in November could be a turning point for U.S. equity. History suggests that if House majority changed hands (currently illustrated by poll) U.S. stock market tends to go up thereafter. On the contrary, SET normally declines in those period.

9) Thailand saw the most earnings upgrade in 3Q22 which led us to adjust the PE model. By incorporating the higher 2023E EPS from 106.5 to 110.0 baht, we get a new best case for SET to be 1750. This moderately put our previous forecast that '1Q22 was the peak of SET' in some jeopardy.

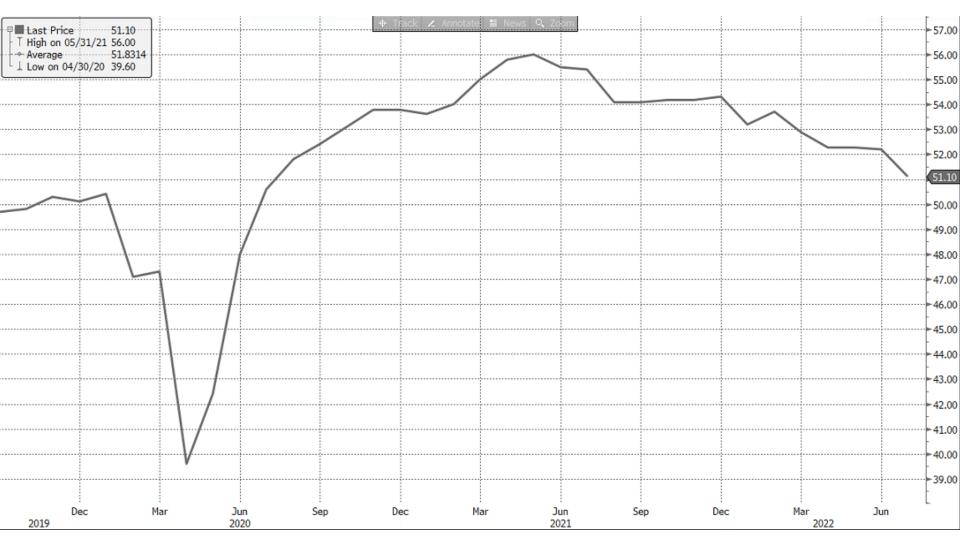

10) DELTA will be the key determinant for SET. Standing at no.3 in terms of market cap with weighting of 4% in the index, we cannot cross out the possibility that the stock will drive the SET Index one way or the other. Our last simulation points to more & more possibility that this stock will be included into SET50/SET100 next round.

Global Liquidity & Economic Indicators

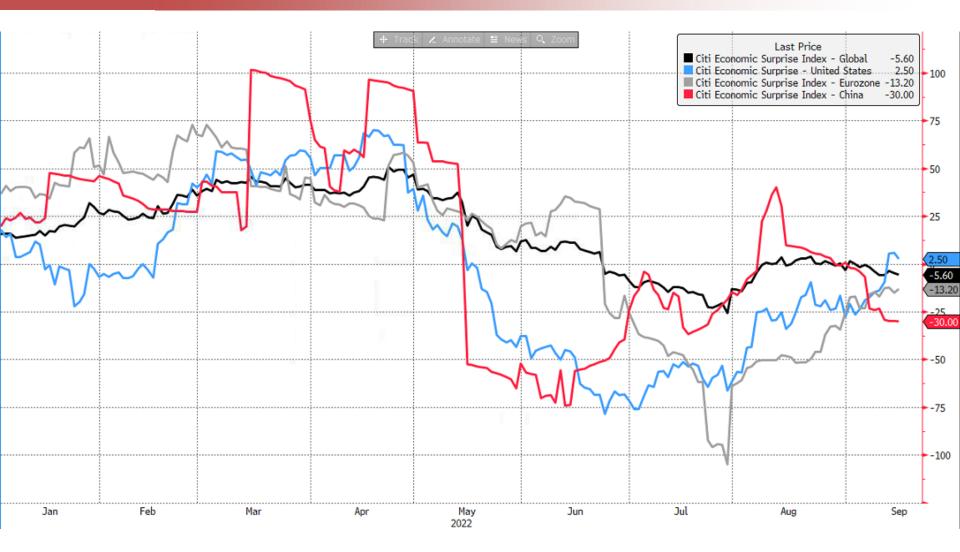

Global PMI continued to fall but was stll in expansion

Economic surprise still hit positive for the U.S.

Note: Data as of 16 September 2022

Source: Bloomberg

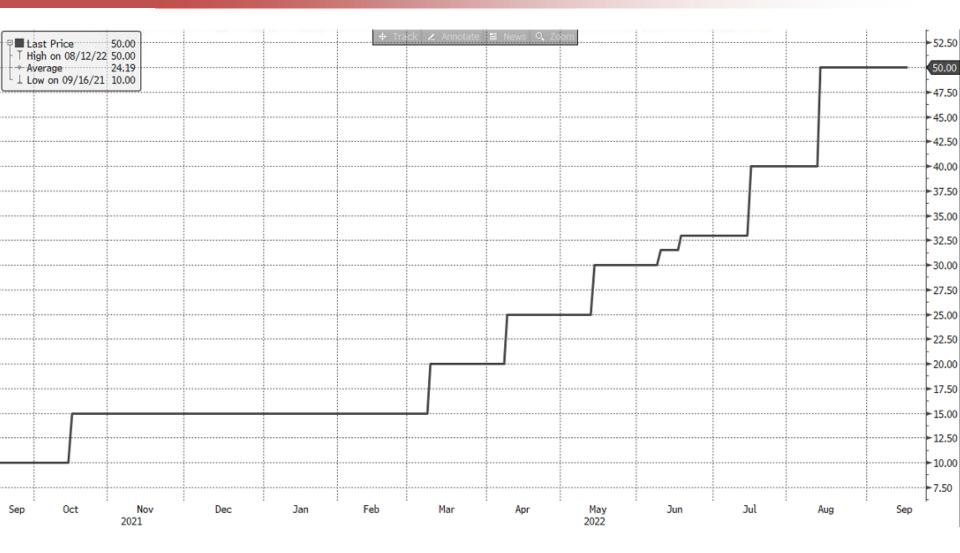

Don't expect U.S. recession talk to kick in as long as unemployment stays below 5%

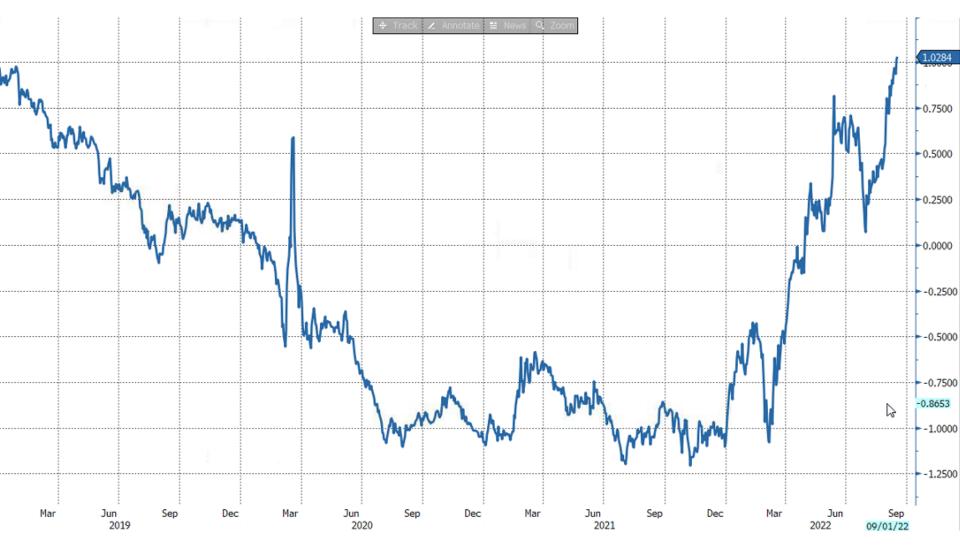

Note: Data as of 16 September 2022

U.S. recession prob. is up but still only at 50%

A surge in real UST yield is the real problem for risk assets and gold

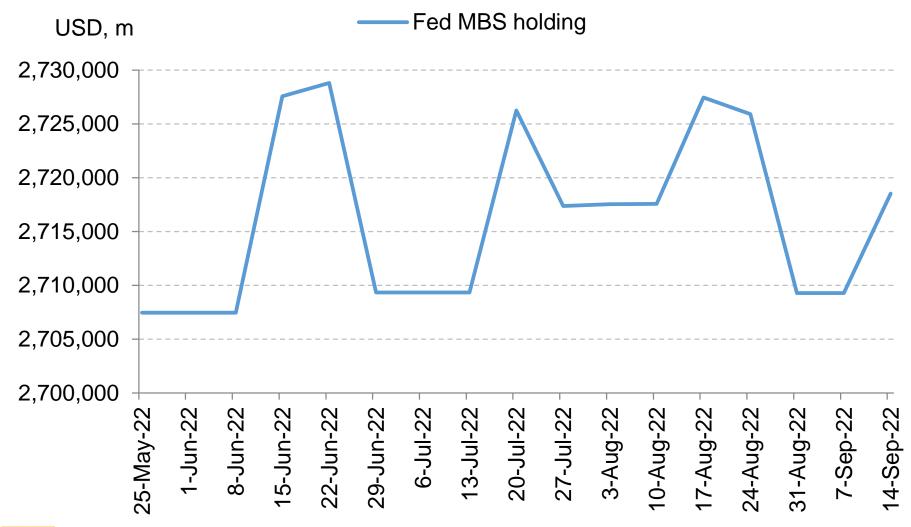

Note: Data as of 16 September 2022

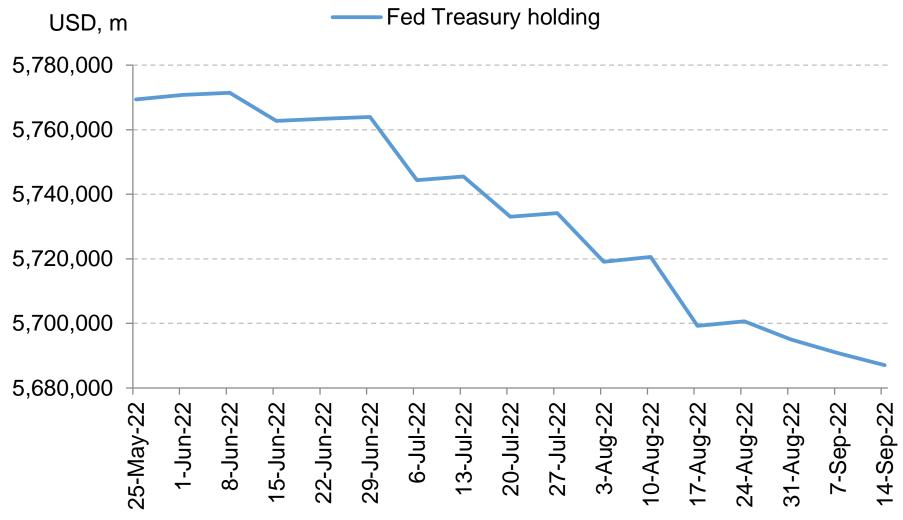

Source: Bloomberg

Fed MBS holding was actually been higher since May

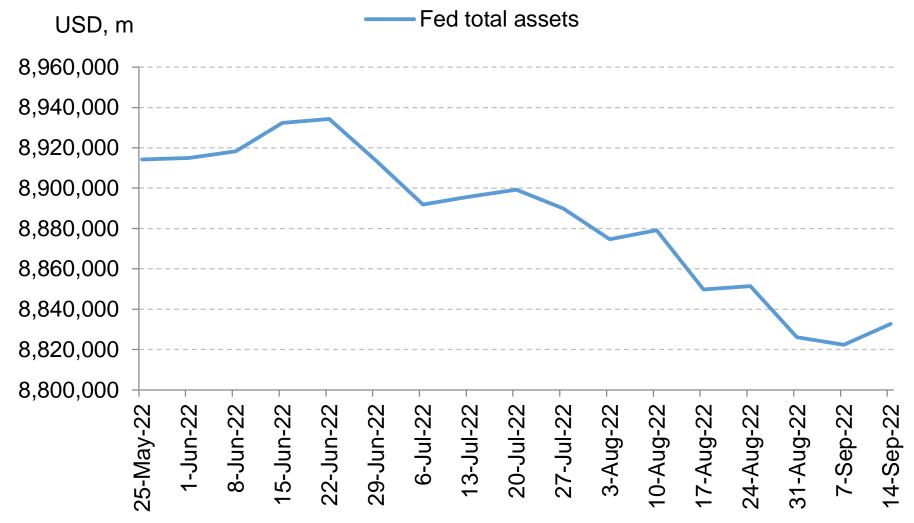

Treasury holding was lower but with only a pace of \$24bn per month, not \$30bn as stated

This resulted in only \$82bn withdrawing from the Fed account so far – Not \$140bn as we previously feared

An overreaction – USD subjected to downside risk

Thai economy: Some shining light

Our view on Thai economy

- We are less concern about raw material cost of Thai producers/manufacturers. Thai PPI starts to fall down with global energy/petro price. Together with higher consumer prices that were already set, these firms may start to see some daylights on their margin. Firms with also low portion of labor cost in their COGS may actually start to gain benefits.
- Consumer confidence continues its recovery path though is still far off from the pre-Covid level. A hike in Thailand minimum wage should help support private consumption in some degree.

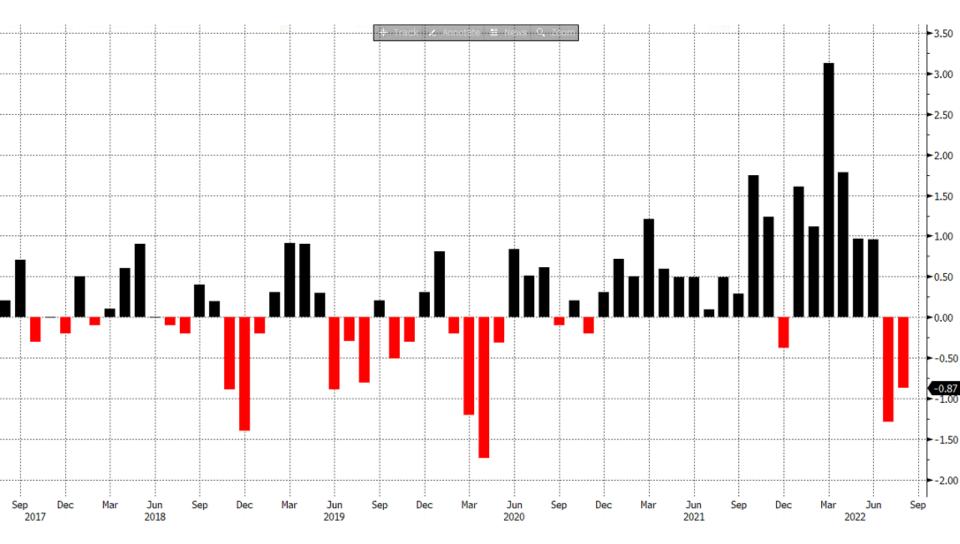

Our view on Thai economy (Con't)

- For the rest of 2022 and continuing into 2023, we see 2 key risks for the Thai economy: Slowdown in exports & Prolonged sticky inflation
- Merchandise exports started to show sign of weakness in July especially export to China which accounts around 10-15% of Thai exports. We hope it will fare better once the China lockdown is subside otherwise we will have a problem.
- Though headline CPI is likely peak out, core CPI is rather sticky.
 If this persists, it would affect purchasing power even if the minimum wage is going to be raised soon. Wage-price spiral could become an issue if things get worse.

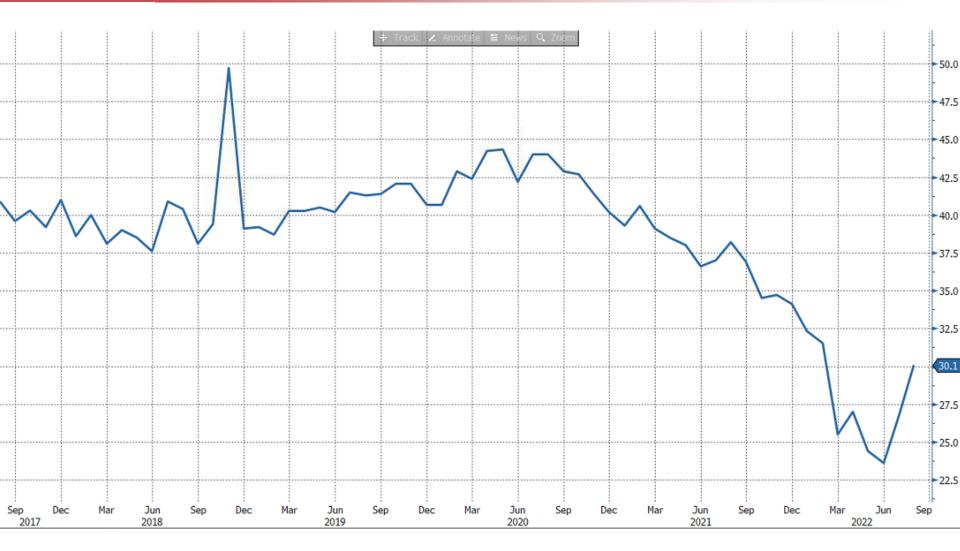

Thai PPI continues to fall MoM

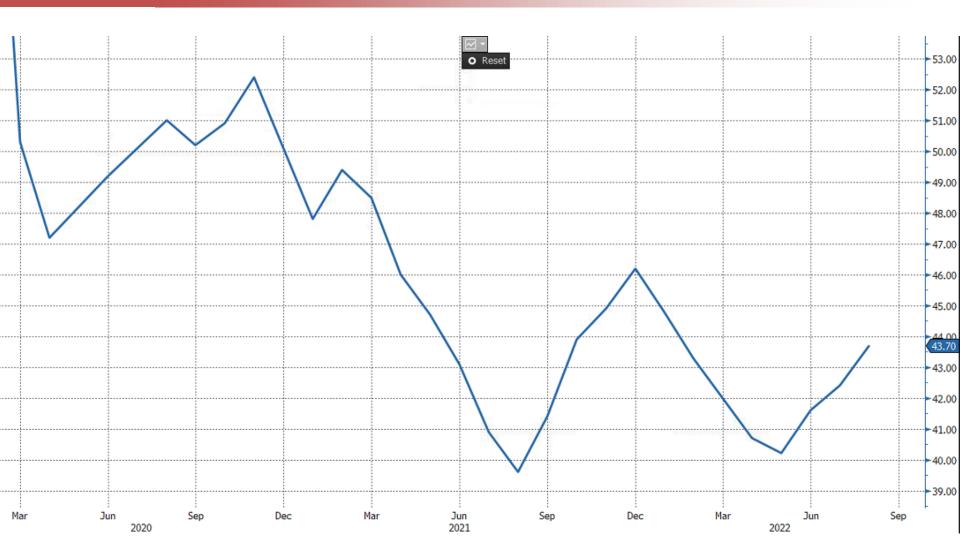

A turning point of firm sentiment on production cost (BSI: input price)

Hopefully a no back down for consumer confidence

Note: Data as of August 2022

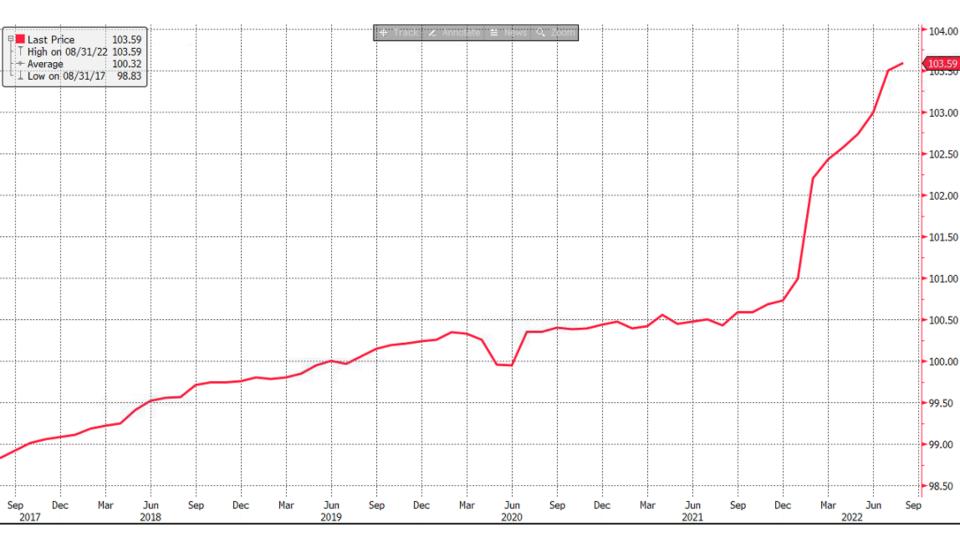

Source: Bloomberg

Thai headline CPI forming peak ...

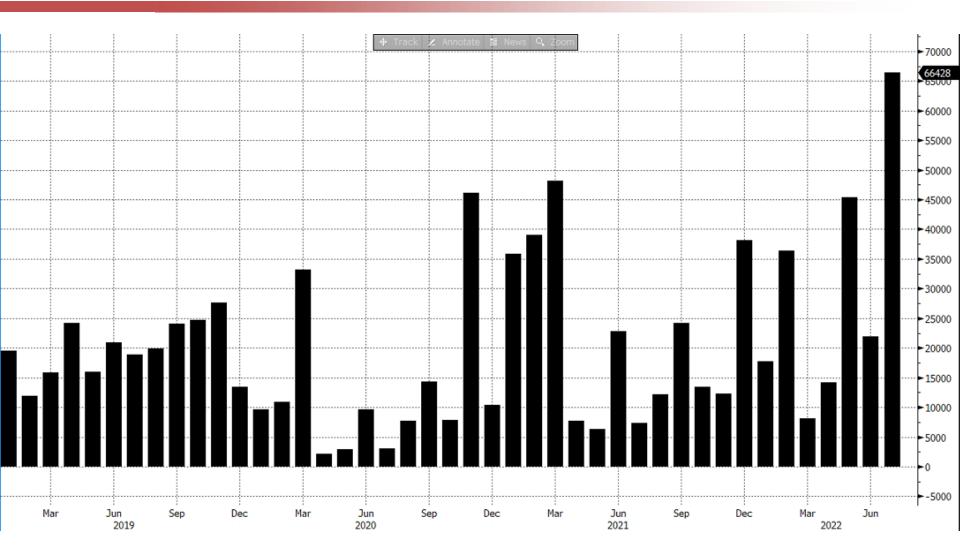

... but core price is not

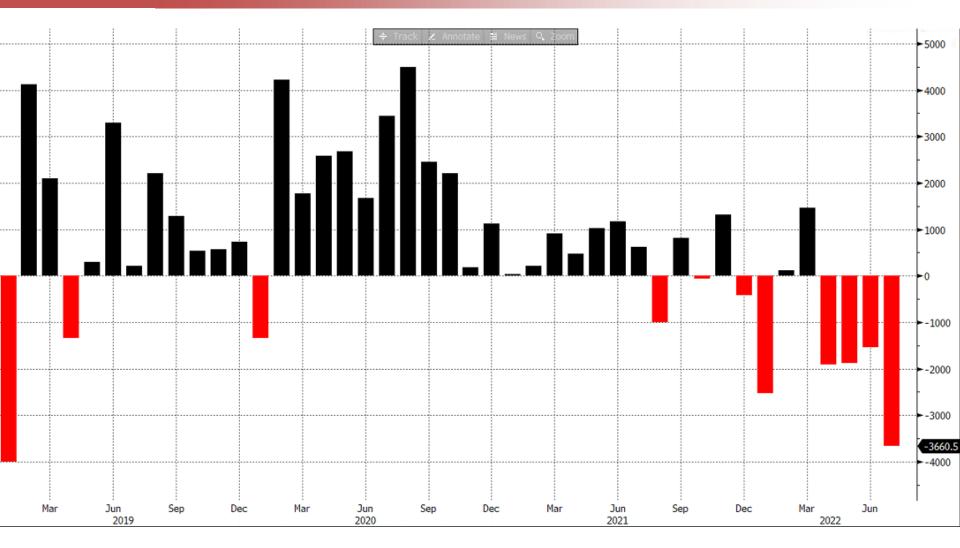

Thai gold import hit highest level since 2019 ...

... and it is one of the reasons why trade balance was being hit hard

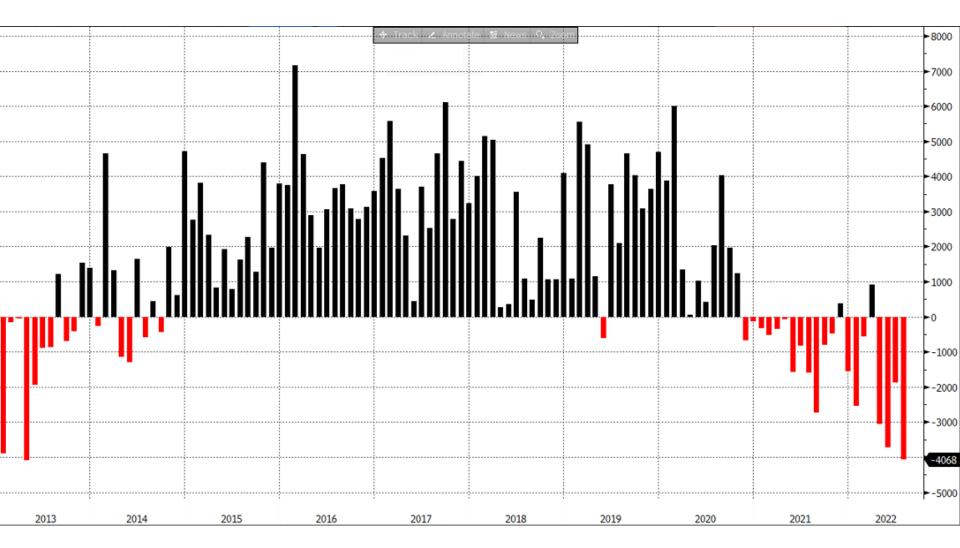

Yellow flag on Thai exports – mainly on indrustial goods

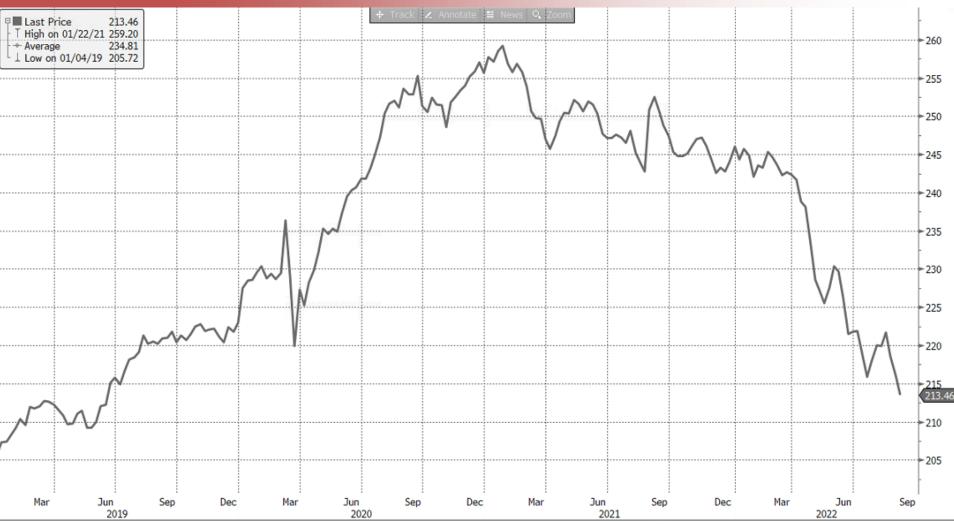

Largest current account deficit since 2013

Thai FX reserves plunged to lowest level since 2019 – THB should be closely watched

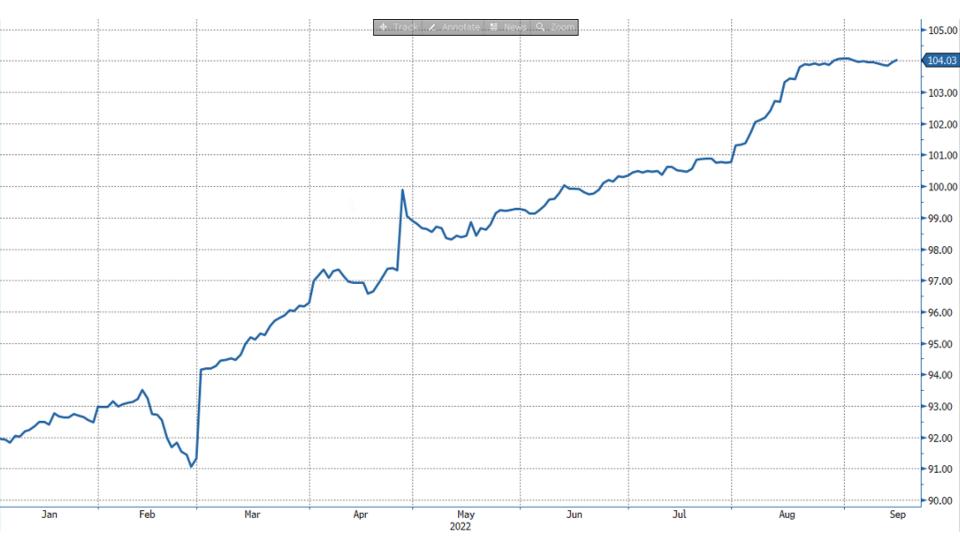

Thai Equity Snapshot & Index Strategy

EPS upgrade was the main driver for SET in 3Q22

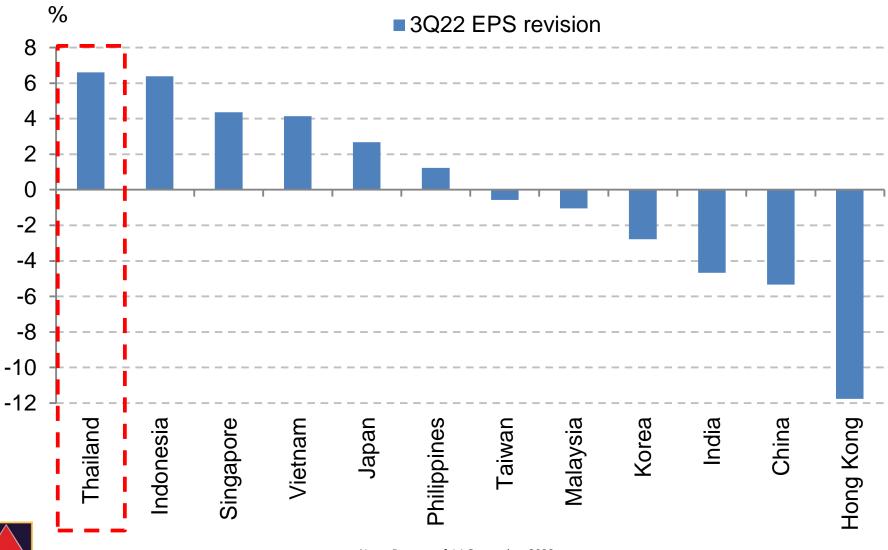

Note: Data as of 16 September 2022

Source: Bloomberg

Thailand saw the most EPS upgrade in 3Q22 (MSCI)

Note: Data as of 14 September 2022

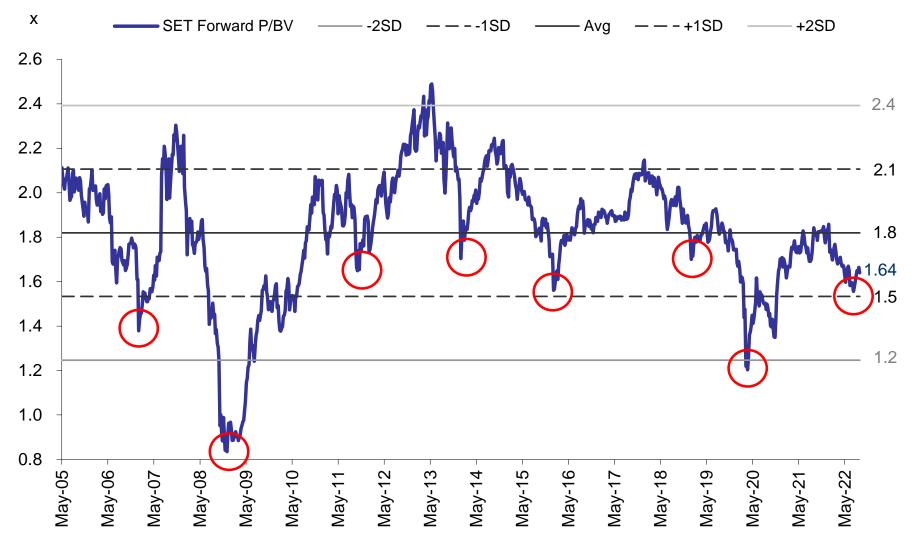

SET index strategy for 4Q22

- Direction: Sideways Current index is sitting right around our base case scenario from PE model. Upside is limited from subpar earning yield gap. However downside should be protected from loosening monetary policy.
- Tactic: Range-bound trade. 1st resistance is 1700 while bluesky scenario will be 1750. On the downside, we are confident that the SET will not breach a low point of 1520 set in 3Q22. However you can start buying if SET begins touching 1580.
- **Risk: EPS downgrade -** We still cannot underestimate the impact of minimum wage hike on firm profits. If they cannot pass through this higher cost then margin could get hit. Or if they over-push, sales might be negatively affected as well.

A trough of SET forward PBV since 2005; -1SD implies SET at 1515 level for current episode

Note: Data as of 16 September 2022; Calculations of SET based on 2022E BVPS of 989.9

| SET50TRI | 9921.71 | 10312.04 | | 3.9 |

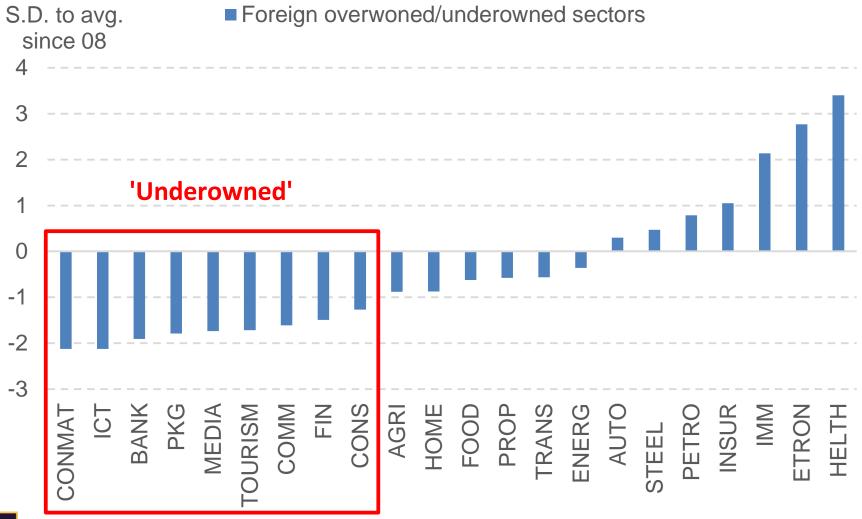

Our view on sector allocation

- As SET currently sitting around our base case scenario, stock/sector selections needs to be strictly applied.
- **<u>Bearish</u>** on global cyclicals as USD 2s10s is plunging but <u>bullish</u> on domestic cyclicals as THB 2s10s is rising.
- Though we love domestic-play sectors, high inflation may stick with us throughout the quarter. To be safe, therefore, we should focus on underowned sectors that are laggard in price & valuation. MEDIA, ICT, FIN, BANK, INSUR stand out most. These sectors should also benefit from minimum wage hike.
- Avoid sectors that are labor-intensive and may not be able to effectively pass through the cost of minimum wage hike such as **CONS, ETRON**

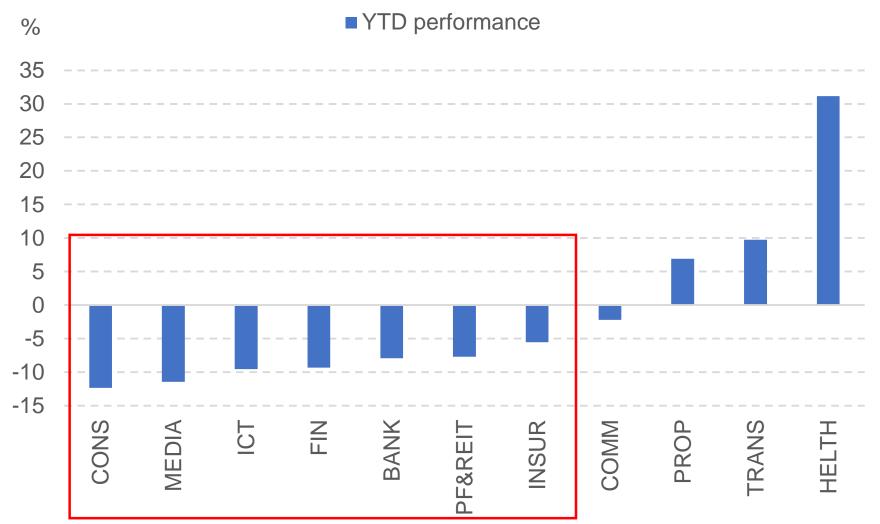

Underowned sectors by foreigner

Note: Data as of 14 September 2022

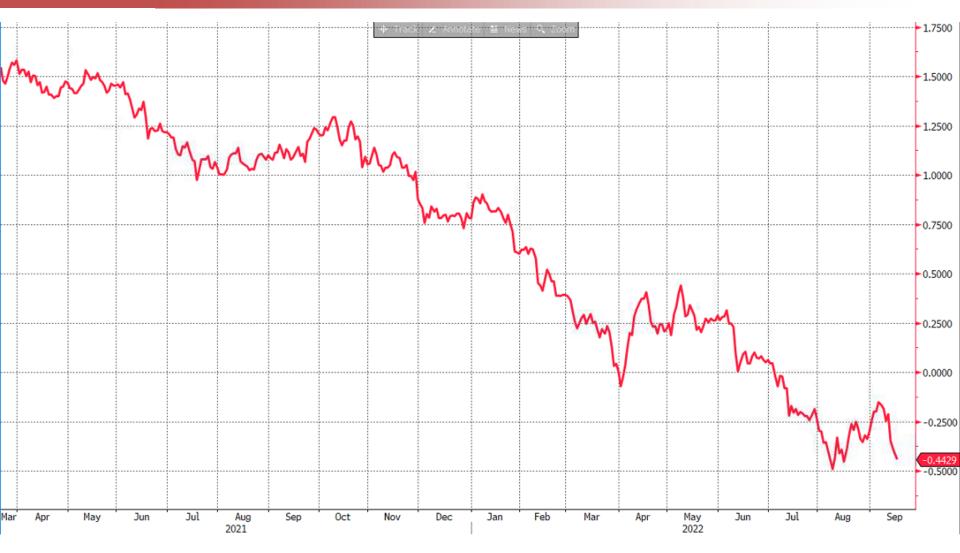

Laggard domestic play

Note: Data as of 14 September 2022

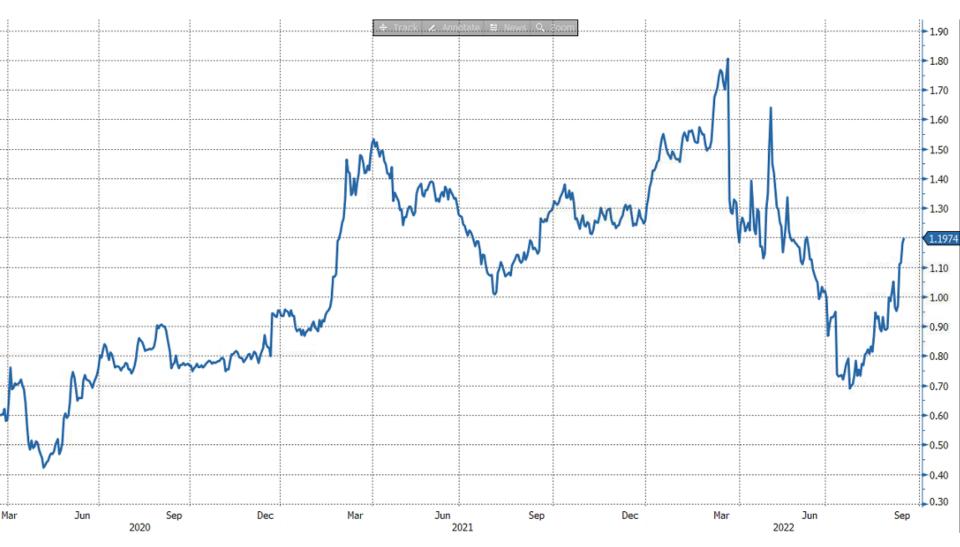

UST curve still in flattening mode – not a good sign for <u>global</u> cyclicals

Note: Data as of 16 September 2022

On the other hand, THB curve was steepening very fast – A good sign for <u>domestic</u> cyclicals

Note: Data as of 16 September 2022

SET50/SET100 Predictions

Why does 'turnover ratio' really matter?

- The main reason why SET is so concern with the liquidity criteria this time is because the old criteria would leave out some large caps from the SET50 even if we use a 2.5% turnover ratio cutoff which is the lowest level ever been reached. **INTUCH is the clear example.**
 - A 2% tunrvover cutoff would definitely bring back **DELTA** into SET50/SET100 calculations, unless the stock is subjected to Market Surveillance Measure List which will automatically exclude its data in that particular month from calculations.
 - In fact if we use the old rule, it is also highly possible that DELTA will be included in the SET50/SET100, as we will likely end up with 2.5% turnover cutoff. Prepare for a fun ride!

Expect the SET to announce a decision on 'Liquidity criteria' during end-October till beginning-November

Major stocks on bubble list (2.5% cutoff is expected)

Thailand water situation: Not nearing crisis level

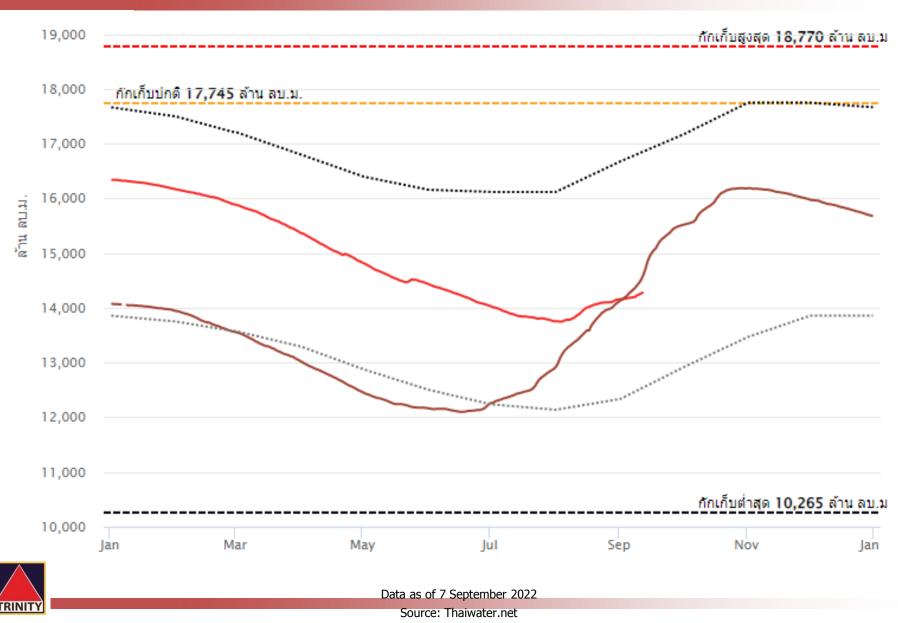

Situation not yet a concern

- Current episode of rains and floods in Thailand will not make much of a trouble like in 2011. Current water in major dams was still far off when compared to that year. As a result we do not expect significant negative impact on the economy.
- 4 sectors that performed worst during 2011 flood crisis are agricultural and manufacturing sectors namely AGRI / IE / PETRO / ETRON. We recommend not short-selling these stocks based purely on flood reason.
- Also, we recommend not speculative buy on 'Flood beneficiaries' theme such as the following sectors: Construction material / Building material / Home repairment

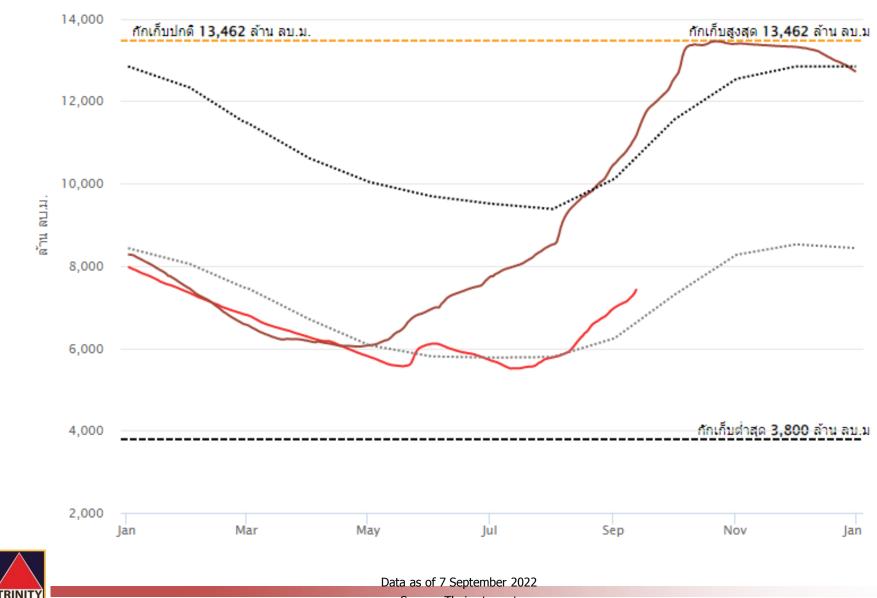

Srinakarin dam (2022: Red / 2011: Brown)

U.S. Mid-term election: A turning point for U.S. equity?

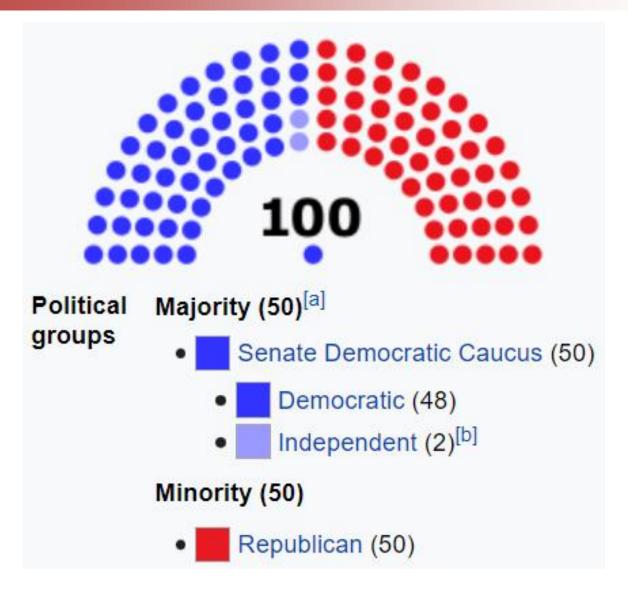

Current composition in U.S. House of Representatives (All 435 seats will be contested in 2022)

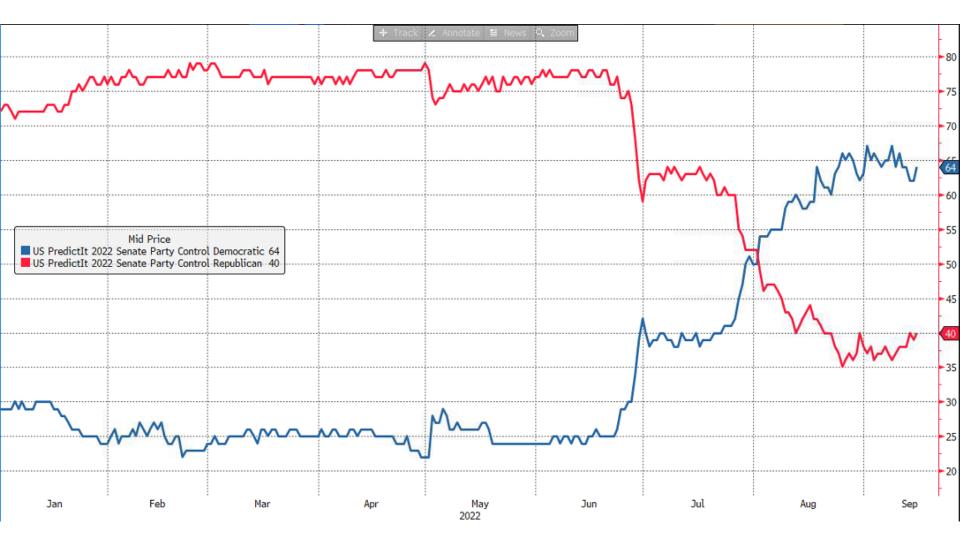

Current composition in U.S. Senate (34 seats will be contested in 2022)

Though Democrat looks likely to control the Senate after 2022 midterms ...

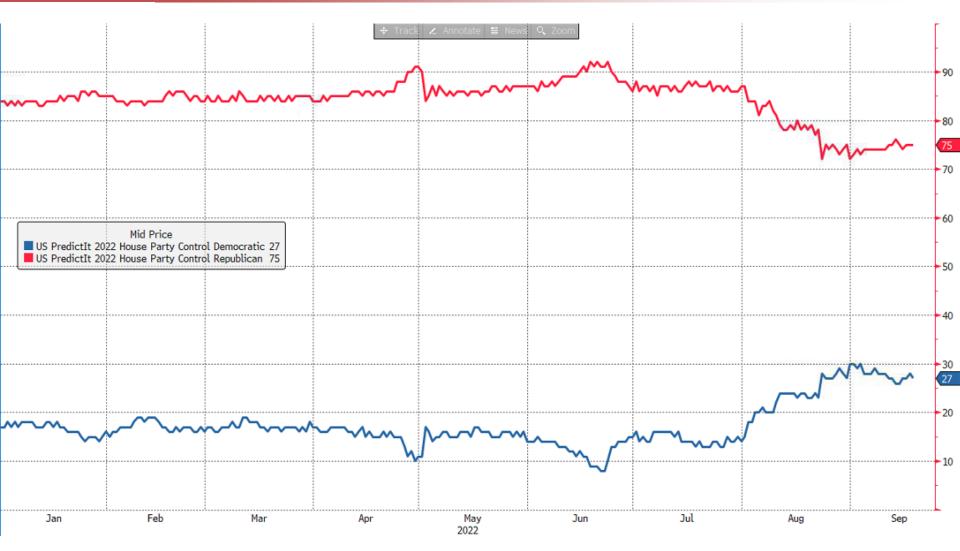

Note: Data as of 16 September 2022

Source: Bloomberg

GoP could take the House – which may push Biden away from a driver's seat

Note: Data as of 16 September 2022

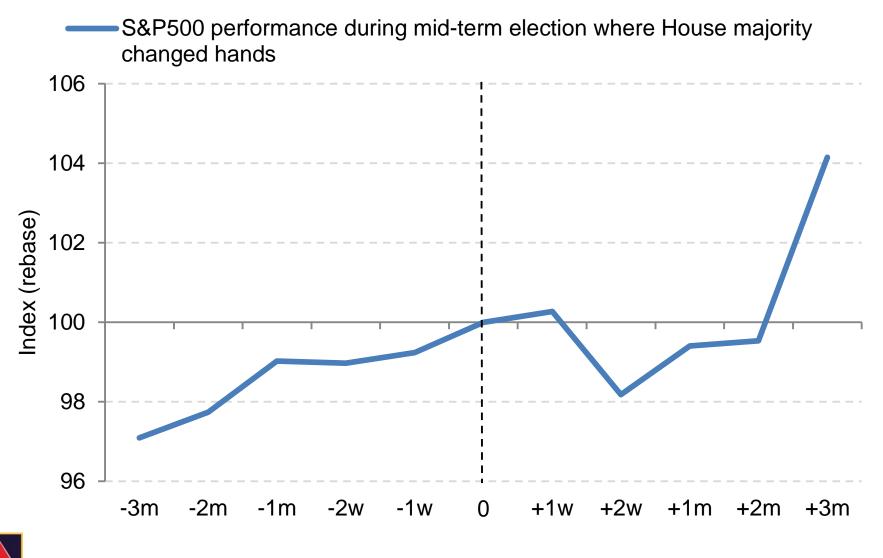

Mid-term elections where House majority changed hands (Since 1900)

| Year | Presidential term | House majority shift from | Note |
|------|---------------------------------|------------------------------|--|
| 1910 | Taft 1 st term | R to D | |
| 1946 | Truman 1 st term | D to R | |
| 1954 | Eisenhower 1 st term | R to D | |
| 1994 | Clinton 1 st term | D to R | Senate majority changed hands from D to R |
| 2006 | Bush 2 nd term | R to D | No majority in Senate though Democrat gaining seats |
| 2010 | Obama 1 st term | D to R | Democrat retained Senate majority though losing seats |
| 2018 | Trump 1 st term | R to D | R retained senate majority and gaining seats |

Note: Data as of 2020 Mid-term election; Highlighted rows depicted modern era

U.S. equities tends to react well when House majority changes hands

Note: Data as of 2020 Mid-term election

SET tends to perform poorly after House majority changed hands
